

# CURING

## PERTINENT INFORMATION FOR THE CLIENT

**Window Film requires a reasonable time to bond to the glass.**

**During this curing time, some NORMAL changes may be noticed. Below is a list of things that could be expected to occur:**

If haziness occurs, this is the water and solution under the film. This will become less noticeable during curing period.

A smoky or milky appearance may occur - this too will disappear during the curing period.

All water bubbles will dry out but a few particles may be seen from the exterior after the curing has been completed which can be attributed to pinhead-size translucent globules of adhesive or slipeeze that have not cured to a perfect clarity. Generally, these particles cannot be noticed from a reasonable distance.

Occasionally, the technician will capture a grain of dust that cannot be eliminated and, in rare cases, this too may be normal. You may expect your film to highlight existing imperfections in the glass as they become more noticeable with the addition of window film.

There will be a thin line of light bordering your film. This line is in proper keeping with the specified installation instructions for all film installations.

In situations involving the installation of film on large pieces of glass, it may be necessary to splice two panels of film together with the seam in a vertical or horizontal direction. In such cases, all care will be taken to use this seam to the aesthetic advantage of your building. The widest available film is 1523mm (5 ft).

Sometimes a customer feels he sees a defect in the film when it is in fact in the glass. It is quite normal that we should look closely at a new purchase, but at times, we see things that were always there but never noticed. Observe the installation from four to six feet away. This is the way we normally look through a window. It is the way you should observe your window film, looking through it, not at it.

**CURING TIME WILL BE APPROXIMATELY 30 DAYS [SUBJECT TO FILM TYPE] AND THE WINDOW FILM SHOULD NOT BE TOUCHED OR CLEANED DURING THIS PERIOD OF TIME.**

COMPANY REG NO. 4234600

At Solartek we pride ourselves on finding the best possible solution to the problems of glare, fading, unwanted heat gain, heat loss, safety, privacy, blast mitigation and security anywhere there is glass.

Given proper care, you will receive many years of benefit and comfort from the presence of our film on your windows.
