

## The Coca-Cola® Services Building becomes energy efficient retrofitting its windows with Umiscreen films.

The existing windows in the Coca-Cola® Building in Brussels are double glazed. To improve the solar gain value (g-value) a total of 1.660m<sup>2</sup> Umiscreen coated IR films were installed on the 510 windows for the price of 99.576 €. This glazing retrofit creates a profit of 14 €/m<sup>2</sup>/year.

The extremely efficient insulating and transparent, modern technology from Umiscreen® permits maximum insulation in order to maintain the most constant temperature and optimizes your cooling and heating. Umiscreen® solar films offer effective solar control properties during summer and an energy-efficient thermal insulation during winter and improve the indoor comfort.

### Key Product Attributes

- High heat-resistant properties. You quickly save up to 25% on your cooling, creating an improved comfort.
- Improvement of the thermal insulation in winter. You can save up to 30% on heating.
- Fast payback and profitable ROI.
- Reduction of CO<sub>2</sub> emissions. Your contribution to carbon footprint reduction
